Keyword searching and browsing in databases using BANKS

[psu.edu](#) [PDF]

G Bhalotia, A Hulgeri, C Nakhe, S Chakrabarti, S ... - icde, 2002 - computer.org

... therefore consider an answer to be a rooted directed tree containing a directed path from the root to each **keyword** node. ... is proportional to the total of its edge weights, and the relevance of a tree is inversely related to its **weight**. ... To solve the problem, we create for each **link**/edge ...

Adaptive information agents in distributed textual environments

[psu.edu](#) [PDF]

F Menczer, RK Belew - ... of the second international conference on ..., 1998 - portal.acm.org

... In the experiments reported here, we use a distance **weighting** function which is biased towards **keyword** occurrences most close to the **link** in question. More specifically, for **link** l , the neural net receives, for each **keyword** k input: $\text{ink}, l = c \cdot 1 / \text{dist}(k, l)$...

Automatic cross-referencing of HCI guidelines by statistical methods

L Goffinet, M Norbomme-Frature - Interacting with Computers, 1999 - Elsevier

... The **weight** of a **keyword** is here considered to be a function of its discriminating power. When a **keyword** is present in two documents, it increases the similarity function between them. The higher its **weight**, the more likely a **link** will be created. ...
